Abstract

The aim of the DBMS mini-project tilted online job portal is to facilitate job seekers in getting information regarding vacancies available in different companies and fields. In this online job portal, job seekers search for the jobs which are suitable for them and employers post the jobs which are vacant at their companies. The job seeker and employer need to register first by providing their details. Job seeker can search jobs based on different search criteria like qualification, location or company and apply for jobs by posting resume. The employers post the jobs to the online job portal by giving complete details like job, duties, qualification and salary. The employers could select employees from available resumes based on their preferences. This site is very useful and saves time for both employers and unemployed youth.
